

Below my descriptions you will find my ui mock up.

DESCRIPTIONS

This is a teacher dashboard for my learning management system. In my sidebar, the user will find clickable sections for classes, progress, announcements, and profile.

When a teacher logs in, they land on classes. In there, they could find their created classes including a number of sections with view class and delete button. There is also a class button for convenient class creation. When they click it a window would appear for fields

When they view a class, they would go to their clicked class wherein a more detailed information about the class would appear. Inside a class, there would be a list of sections created by the teacher under that class including the number of enrolled students for each section. In there, there would also be an add section button.

The sections are clickable, when they click a section, they would go to the section page. beside the section name, there would be 3 dots and when you click that, you can have options for delete, view class code and edit (they can edit created class code and section name). There would also be a lessons, assignments, quizzes, and students category. When they are in lessons, they would see their uploaded learning materials. There is also an add material button and when they click that, they can upload a file or paste a link. There is also a field for material name and material description. The materials are clickable and when they click it, a detailed information about the learning material would appear (see mock up). They can also edit or delete the material.

For the quizzes, assignments.. I would leave to you the functions, buttons and information, literally everything because i dont have mock up. Just refer to my provided instructions so that you have idea of what you are doing. Just remember that, every uploaded class work has a list of students who already mark as done their work and those who doenst yet.

For students category, thats where the list of enrolled students in your class section. As well as the pending join request through the code.

Feel free to redesign and improve my ui as long as the functions is there. you can add icons (if you will add icon, just leave it blank and i willbe the one who will import icon picture), you can rearrange buttons, everything. Only the sidebar would look the same. (for sidebar format i will send to you my code).

Color palette:

#fff8cf - light yellow

#231e1f - dark gray

#e7e7e7 - light gray

#f6f6f6 - lighter gray

#ffffff - white

#000000 - black

Quiz 1

googleforms.com

Description

This quiz is designed to assess your understanding of the basic concepts discussed in the lesson. It consists of multiple-choice and short-answer questions. Read each question carefully before answering. Make sure to submit your responses before the deadline. Good luck!

Instructions:

- Choose the best answer for each question
- Do not refresh the page while taking the quiz
- Submit only once
- Time limit: 15 minutes
